

Price Monitoring - Bug #1829

the entire row of the mapped item should be deleted from the intersection table when the user un-links the mapped item from the defined item

09/18/2019 10:10 AM - Israa Naser

Status:	Closed	Start date:	09/18/2019
Priority:	Normal	Due date:	
Assignee:	Israa Naser	% Done:	100%
Category:		Estimated time:	0.00 hour
Target version:		Spent time:	0.00 hour
Co-Workers:	Abed Abuhawala	Actual Result:	
Severity:	Normal	Environment:	QA
Category:	Price monitoring module	Transaction Number:	
Sub-Category:	Manage Defined Items Screen - إدارة العناصر المحددة	Browser:	Chrome
Step_Description:		URL:	
Pre_Conditions:		Test Case ID:	
Expected Result:			
Description When the user deletes a mapped item from the intersection table, the entire row of the item should be deleted from the intersection table, instead of changing the value linked to Null as this causes side-effects with the linked provider to the mapped item Steps to duplicate: 1- Go to إدارة العناصر المحددة screen and make sure there is a defined item with mapped items linked to it 2- Go to إدارة العناصر المحددة screen and link a provider to the mapped item from step 1 3- Go back to إدارة العناصر المحددة and delete the mapped item (separate it from the defined item) 4- check that the item has been removed from the intersection table related to the defined item, and the intersection table related to providers Expected: the item should be removed from both tables and un-linked from both defined item and providers Actual: the item still exists in the intersection table related to providers and can be linked again to the same provider

Covered in SRS

9.5.4 Task screens and fields

Tested and verified that un-linking the mapped item from the defined item deletes it from the provider as well.
